PIERSON'S
ART GALLERY,

Ruth Street, Opposite Court House,
RUSHVILLE, INDIANA.

Pictures of all kinds known to the Profession taken in the
Finest Style of the Art.

New Style Rembrant Pictures Taken.

Lebanon, Ky., November 7, 1876.—It recommends itself to farmers, even those who have an abundance of timber.

MILTON ROGERS, SR.

Lebanon, Ky., August 12, 1879.—I have 1,100 panels of Stone's Patent Fence, 150 panels on creek, the water has been frequently 4 feet over the top of the fence, the current running directly over the fence, and there is not a rail missing. It is the best and strongest fence I ever saw made of wood.

D. J. SCHOOLING.

Lebanon, Ky., August 14, 1879.—We the undersigned have made Stone's Air Line Fence on our farms and believe it to be the cheapest and best farm fence we have ever seen, and recommend all farmers to build it:

L. A. SPALDING,
W. B. ENGLAND,
U. GARTIN,
GEO. A. BRICKEN,
GEO. L. GRAHAM,
FINLEY SHUCK,
Attorney at Law.
M. C. GRAHAM,
Hon. C. S. HILL,
Rev. T. H. CLELAND,
RUSSELL & AVRITT,
Attorneys at Law.
E. H. MATTINGLY,
E. H. O'DANIEL,
S. L. GRAY,
J. M. McATEE,
HENRY O'NEAL,
Col. WM. E. RUSSELL,
W. B. JARBOE,
R. E. YOUNG,
JOHN J. WOOD.

To any person wishing to make the fence we will, on receipt of \$5, send Farm Right to build it on his farm, with full and complete directions. Money can be sent by Post-office Money Order, Registered Letter or Draft. Address,

PHILLIPS & ROGERS,
LEBANON, KENTUCKY.

STONE'S AIR-LINE FENCE.

PATENTED BY J. H. STONE, WASHINGTON COUNTY, TEXAS.

The strongest and best fence that can be made. Farmers building it everywhere it has been introduced. Its simplicity, cheapness, strength and durability, are the secrets of its success. Owing to which, no other patent fence can compete with it. It enables any farmer to change his old crooked rail fence into a straight fence and save from one-third to one-half the rails; also saving enough ground to pay all expenses of rebuilding the fence. In only stands on one foot of ground and there are no foul weeds growing to shade and rot the rails. Two good workmen can take down the crooked fence, plant the posts, and build complete, forty panels in a day. The usual price charged is six cents a panel. Scarcely any farmer has a fence so poor that he cannot get enough good rails from it to make a good fence, by adding the posts and wire. Only one post to the panel is required; the stakes, or false posts, are made of the short pieces of rails that could not be utilized in any other way. The rails are placed alternately on one side of the post and the other, thus dividing the weight of the fence; there being as much weight on one side of the fence as the other, which prevents the fence leaning over. The rails alternating gives it a worm the thickness of the posts, which adds greatly to the strength besides giving it just enough worm to prevent the rails passing each other.

The rails are laid up edgewise allowing the water to run off, and in that way will last much longer than laid flat as in the crooked worm fence.

The old lap in the crooked fence is relieved; the lap comes nearer the

end, the old lap dries out and will probably last as long as any other part of the rail, when, if allowed to remain in the old fence, it would have rotted in a few years.

The cost of wire is from 5 to 6 cents per pound—at 6 cents per pound the wire will cost 2 cents per panel.

If sawed lumber is used, have the rails 12 feet long, 1½ inches thick, and 4 inches wide, which will make a cheaper, stronger, and better fence than plank fastened on with nails. It will save more than one-third the posts; the wire will not cost as much as the nails; it will always stand erect; there will be no annoyance by the rails breaking or drawing out and the planks dropping off; and the boards will last much longer than nailed to a flat surface with no chance to dry out when wet.

It is economy from beginning to end, and any farmer who will adopt it will save hundreds of dollars in fencing.

Improvements have been made in our mode of farming, farming implements, and everything connected with the farm, why not improve in our fencing? The farmer's annual expenses for fencing exceed the expense of all other improvements on the farm—costing more than his houses, barns, etc., etc. If you have an abundance of timber, why use ten or twelve rails when seven will make a better fence, to say nothing about the ground saved; the satisfaction of having a fence that will not blow down; that stock cannot get over; besides it will add from \$5 to \$10 per acre to the appearance of a farm and consequently to the value of it, to have a straight fence upon it. Make a good fence of the material you have. Sell your timber, or save it until you actually need it, instead of using it to repair your old crooked fence that will always be a nuisance.

We give below a few of the numerous certificates we hold from intelligent farmers showing the utility of the Air Line Fence.

Olmstead, Logan Co., Ky., Dec. 11, 1876.—DEAR SIR: I, with a number of my neighbors, have been using Stone's Air Line Fence since the spring of 1874, and am satisfied that it is a very superior fence.

G. R. BROWDER.

South Union, Ky., Dec. 12, 1876.—DEAR SIR: I am pleased with the Air Line Fence, it saves rails and land, and makes a stock-proof fence.

RUFUS CAMPBELL

Bewleyville, Ky., Dec. 18, 1876.—DEAR SIR: I am very much pleased with the "Air Line Fence" and think it a great saving of rails, land, and labor.

B. B. STITH.

Brazos Co., Texas, Feb. 27, 1873.—I have been and am now using Mr. John H. Stone's patent fence, and I can heartily recommend it. It not

only secures the rails from being burnt, but is the cheapest and most durable fence I have ever seen.

L. HOLLIDAY.

Burleson Co., Texas, March 1, 1873.—In my opinion is far superior to all fencing I ever saw, making a fence out of half the rails, and is bound to last much longer than rails put on in the usual way, and built so strongly that stock cannot break it down.

J. H. WESTBROOK.

Madison Co., Ohio, July 22, 1872.—It is in my opinion the best and the cheapest fence I have ever seen. It is certainly the strongest and requires less rails to build it than any fence I ever saw.

C. M. BOYCE.

Brentwood, Williamson Co., Tenn., August 27, 1872.—For strength, cheapness, and durability, it far exceeds any that I have ever seen.

W. M. CARR.

Lebanon, Ky., August 10, 1879.—MESSRS. PHILLIPS & ROGERS: Dear Sirs—I have made 3200 panels of Stone's Air Line Fence on my farm, and for cheapness, strength and durability it cannot be excelled. My brother and I handle mules extensively, and it is the only fence that we have had that will keep them within the enclosure.

JOHN J. GROVE.

Lebanon, Ky., August 12, 1879.—MESSRS. PHILLIPS & ROGERS: Dear Sirs—I have made Stone's Air Line Fence on my farm and cheerfully recommend it to farmers, for cheapness, strength and durability. All with whom I have talked are fully satisfied with it. It has saved the county thousands of dollars for material in fencing.

N. S. RAY, Cashier Nat. Bank.

Lebanon, Ky., August 12, 1879.—I have made Stone's Air Line Fence sold by Messrs. Phillips & Rogers, and in my ride over the county I find it in every neighborhood made by the best farmers we have. I have never yet heard a farmer say he did not like it, on the contrary all express themselves well pleased with it.

J. M. BALLARD, Sheriff Marion County.

Lebanon, Ky., August 12, 1879.—I have made Stone's Patent Fence, sold by Messrs. Phillips & Rogers, and can recommend it to farmers as a cheap and substantial fence.

F. WILSON.

V. P., Nat. Bank of Lebanon, Ky.

Lebanon, Ky., August 12, 1879.—MESSRS. PHILLIPS & ROGERS: Dear Sirs—I have been using Stone's Air Line Fence on my farm since the spring of 1875 and have not had to repair a panel of it yet. I have a great deal of it on my farm and think it the best fence I ever saw, and would recommend all farmers to build it. It is cheap, durable, wind and stock proof.
