

Commercial Feeds in
Kentucky
1964

UNIVERSITY OF KENTUCKY
CENTENNIAL
1865 - 1965

Regulatory Bulletin 186

University of Kentucky
Agricultural Experiment Station
Lexington

The device of the University's Centennial Year was adapted from the Brioschi sculpture on the campus. The device suggests the initials of the University.

The upward sweep and downward curve of its elements indicate the University's Centennial theme—the aspiration for achievement in the future coupled with honor for the traditions of the past

Analytical data by the laboratory staff.

INTRODUCTION

This Bulletin contains the results of inspection and analysis of commercial feeds sold in Kentucky during the calendar year of 1964 and other information helpful to those interested in this field.

During 1964, 3,372 official samples of feed were secured by Inspectors. 2,832 or 84.0% of these passed inspection and analysis satisfactorily.

During 1963, 3,368 official samples were secured and 2,885 or 85.6% of these were passed.

The total estimated tonnage for 1962 was 569,800 tons of commercial feed distributed in Kentucky. In 1963, the tonnage was 576,986 tons. In 1964, a total of 535,604 tons of feed was sold, down 40,000 tons from the previous year.

During 1964, inspectors called on most feed mills in Kentucky and discussed manufacturing practices pertaining to medicated feeds. This is continuing in 1965, to assist plant managers in bringing facilities up to FDA standards.

ESTIMATED TONNAGE OF SALES BY CLASS OF FEED,
KENTUCKY, 1963

<u>Mixed Feed</u>	<u>Tons</u>
Calf Feed	5,253
Cattle Feed	29,101
Dairy Feed	94,200
Dog & Cat Feed	26,206
Horse & Mule Feed	12,969
Mineral Feed	8,013
Pig & Hog Feed	96,803
Poultry Mashs	152,495
Rabbit Feed	1,781
Scratch Feed	8,290
Sheep Feed	863
Stock Feed	965
Turkey Mashs	5,860
Miscellaneous Mixed Feed	<u>11,456</u>
TOTAL MIXED FEED	<u>454,255</u>
<u>Straight Materials</u>	<u>Tons</u>
Alfalfa Products	1,814
Animal Products	8,975
Barley Products	126
Brewers Products	2,336
Corn Products	26,423
Cottonseed Products	10,440
Distillers Products	3,891
Linseed & Flax Products	792
Molasses	16,900
Oat Products	1,280
Soybean Products	14,258
Wheat Products	30,076
Miscellaneous Products	<u>5,420</u>
TOTAL STRAIGHT MATERIAL	<u>122,731</u>
GRAND TOTAL	576,986

UREA

The following information may be of some help to manufacturers and feeders using urea.

Urea is a white crystalline powder made by combining ammonia and carbon dioxide under pressure in equipment that will withstand high temperature.

Urea contains 46.5% nitrogen, which is equivalent to 291% protein. The commercial product "262" Feed Compound, is urea which has been diluted with other materials to prevent caking, and contains 42% nitrogen which is equivalent to 262% protein. The addition of 1 percent of this material to a dairy feed is equivalent to adding 2.62% protein. Besides urea's protein equivalent value, one must also consider its lack of energy value as compared to the common high protein feeds. An example of this, if the nitrogen in urea is used as efficiently as the nitrogen in high protein feeds, it will require approximately 14 pounds of urea, plus 100 pounds of grain to replace 100 pounds of soybean oilmeal.

Urea, when used as an ingredient in feeds sold in Kentucky is shown in the guaranteed analysis as follows: Crude Protein _____%. This includes not more than _____% equivalent crude protein from non-protein nitrogen. Crude Fat _____%. Crude Fiber _____%. One percent of "262 Feed Compound" would be 2.62% equivalent protein from non-protein nitrogen. Urea should be shown as an ingredient under "Ingredients".

Cattle, sheep, and goats are able to convert urea to a usable form through the action of micro-organisms in the rumen. The organisms convert the nitrogen of urea to protein in their cell bodies which are in turn digested by the animal.

Horses, swine, dogs, and other single-stomach animals are unable to utilize urea.

The Association of American Feed Control Officials has a regulation to the effect that urea be used in such limited quantities as to insure the total amount present shall not exceed 3 percent of the (grain) ration or 1/3 of the total protein. If a feed contains more than 3 percent of urea, the label shall bear a statement of proper usage and the following in type of such conspicuousness as to render it likely to be read and understood by ordinary individuals under customary conditions of purchase and use.

WARNING: This feed should be used only in accordance with directions furnished on the label.

WEIGHTS PER BUSHEL

Feeders and Feed Manufacturers often need to know the legal weight requirements for grain and seeds when sold for feeding and other purposes. The following is quoted from the Kentucky Revised Statutes in this connection.

363.040 (4821) Bushel, what weight constitutes. The following weights constitute a bushel of the article named:

- (1) Barley, forty-seven pounds.
- (2) Bluegrass seed, fourteen pounds.
- (3) Bottom onion sets, thirty-six pounds
- (4) Bran, twenty pounds.
- (5) Buckwheat, fifty-six pounds.
- (6) Castor beans, forty-five pounds.
- (7) Clover seed, sixty pounds.
- (8) Coal, seventy-six pounds.
- (9) Corn in the ear, seventy pounds, from November 1 to December 31 inclusive, and sixty-eight pounds at all other times of the year.
- (10) Corn meal, fifty pounds.
- (11) Corn, shelled, fifty-six pounds.
- (12) Dried apples, twenty-four pounds.
- (13) Dried peaches, thirty-nine pounds.
- (14) Ear corn in the shuck, seventy-five pounds.
- (15) English bluegrass seed, fourteen pounds.
- (16) Fine salt, fifty-five pounds.
- (17) Flax seed, fifty-six pounds.
- (18) Ground peas, twenty-four pounds.
- (19) Hemp seed, forty-four pounds.
- (20) Hungarian grass seed, fifty pounds.
- (21) Irish potatoes, sixty pounds.
- (22) Millet seed, fifty pounds.
- (23) Oats, shelled, thirty-two pounds.
- (24) Onions, fifty-seven pounds.
- (25) Orchard grass seed, fourteen pounds.
- (26) Peas, sixty pounds.
- (27) Plastering hair, eight pounds.
- (28) Rye, fifty-six pounds.
- (29) Salt, fifty pounds.
- (30) Sweet potatoes, fifty-five pounds.
- (31) Timothy seed, forty-five pounds.
- (32) Turnips, sixty pounds.
- (33) Unslaked lime, thirty-five pounds.
- (34) Wheat, sixty pounds.
- (35) White beans, sixty pounds.

DRUGS AND FEED ADDITIVES

Antibiotic guarantees on the label. In terms of the amount of antibiotic present, equivalents, and standards are as follows:

Bacitracin: Bacitracin, zinc bacitracin, manganese bacitracin, bacitracin methylene disalicylate are expressed in terms of bacitracin activity which they contain. One gram of activity is equal to 1.0 gram of bacitracin master standard (42,000 units).

Chlortetracycline: The term, chlortetracycline, may be used as an abbreviation for chlortetracycline hydrochloride, which is the standard.

Erythromycin: One gram of erythromycin base is equal to 1.08 gram of erythromycin thiocyanate.

Hygromycin B: One gram is equal to 1,000,000 units of hygromycin activity.

Neomycin sulfate: Label declarations should read as neomycin sulfate (providing x grams neomycin base).

Novobiocin: One gram is equal to 1.0 gram of novobiocin acid.

Nystatin: One gram is equal to 2,800,000 units.

Oleandomycin: One gram is equal to 1.0 grams of oleandomycin base.

Oxytetracycline: One gram is equal to 1.0 gram of oxytetracycline hydrochloride.

Penicillin: The term, penicillin, refers to sodium penicillin G (master standard) which is equivalent to 1.667 gram procaine penicillin.

Streptomycin: One gram is equal to 1.0 gram of streptomycin base.

Tylosin: One gram is equal to 1.0 gram of tylosin base.

NOTE: In guarantees on a feed label the form of the antibiotic may be shown in parenthesis. Example: Penicillin (from procaine penicillin) 6 grams per ton, Penicillin (from procaine salt) 6 grams per ton, Bacitracin (from zinc bacitracin) 10 grams per ton. When a guarantee is made in this manner on either a medicated or non-medicated type of label, the antibiotic need not be included in the list of ingredients.

Certifiable Antibiotics, a special class of drugs, are those antibiotics listed in Section 507 (a) of the Federal Food, Drug, and Cosmetic Act, namely

penicillin
streptomycin
chlortetracycline
chloramphenicol
bacitracin

and any derivative thereof. Examples of derivatives would be dihydrostreptomycin, zinc bacitracin, and tetracycline. When drugs subject to certification are added to animal feeds, data must be available to show the safety and therapeutic efficacy for the claims made in the labeling. When new drugs are included in a product containing a certifiable antibiotic, the claims for therapeutic efficacy and safety must be established for the combination, and an Antibiotic Form 10 must be filed with the Food and Drug Administration before the product may be legally marketed in interstate commerce. The Antibiotic Form 10 is for all intents and purposes a new drug application.

New Drugs are those drugs for which the safety and effectiveness, because of short time in use, has not been completely established. Before feeds

containing new drugs can be marketed in interstate commerce, there must be on file with the Food and Drug Administration an effective new drug application for the particular feed. The effectiveness for the intended purpose of drugs used in feeds did not need approval of the Federal Food and Drug Administration before passage of the Food Additive Amendment of 1958. New Drug applications receiving clearance prior to that date were cleared on the basis of safety alone. Antibiotics which are not subject to certification are handled as new drugs under the Federal Food, Drug, and Cosmetic Act. The following are new drugs as of August 1964:

2-acetyl-amino-5-nitrothiazole
 amprolium
 amprolium and ethopabate
 arsenosobenzene
 bithionol and methiotriazamine
 pyrimethamine (2,4-diamino-5 (p-chlorophenyl) 6-ethylpyrimidine)
 dienestrol diacetate
 diethylcarbamazine
 diethylstilbestrol
 3,5-dinitrobenzamide
 enzymes (except pepsin)
 glycarbylamide
 hygromycin B (in chicken feeds)
 nicarbazin
 nihydrazone
 nithiazide
 novobiocin
 nystatin
 oleandomycin
 promazine hydrochloride
 reserpine
 ronnel
 thiabendazole
 tylosin
 p-ureidobenzeneearsonic acid
 zoalene

Not new Drugs. Certain drugs cease to be classified as new drugs at specified levels and uses when, in the opinion of experts qualified to judge the safety and effectiveness of new drugs, sufficient experience has been gained in their use to warrant their classification as "not new drugs". These drugs may be new drugs under other specific conditions of use and representation. Any question concerning level or use should be referred to the Federal Food and Drug Administration. Before passage of the "Kefauver-Harris Amendments of 1962" effectiveness was not a criterion for drugs being given "not new drug" status. The following are not new drugs as of August 1964:

acetyl(p-nitrophenyl) sulfanilamide
 amino nitrothiazole
 arsanilic acid
 cadmium anthranilate
 cadmium oxide
 ethylene diamine dihydriodide
 di-n-butyltin dilaurate
 dichlorophen (2,2' dihydroxy-5,5' dichlorodiphenyl-methane)
 dimethylpolysiloxane
 dinitrophenylsulfonylethylenediamine'
 dried rumen bacteria
 dynafac
 erythromycin thiocyanate
 furazolidone
 hygromycin B (in swine feeds)
 iodinated casein
 menadione sodium bisulfite
 neomycin
 nicotine
 3-nitro-4- hydroxyphenyl arsonic acid
 nitrofurazone
 nitrophenide

4-nitrophenyl-arsonic acid
oxytetracycline
pepsin
phenothiazine
phthalylsulfacetamide
piperazine dihydrochloride and monohydrochloride
piperazine hexahydrate
piperazine phosphate monohydrated
piperazine sulfate
propylene glycol
sodium arsanilate
sodium fluoride
sodium propionate
sulfaquinoxaline
sulfathiazole
vitamin D (for prevention of milk fever)

Feed or Food Additives. A feed or food additive is the legal status of any substance the intended use of which results or may reasonably be expected to result, directly or indirectly, in its becoming a component or otherwise affecting the characteristics of any food or feed (including any substance intended for use in producing, manufacturing, packing, preparing, treating, packaging, transporting, or holding feed or food), if such substance is not generally recognized, among experts qualified by scientific training and experience to evaluate its safety, as having been adequately shown through scientific procedures (or in case of a substance used in feed or food prior to January 1, 1958, through either scientific procedures or experience based on common use in feed or food) to be safe under the conditions of its intended use. Excepted are substances used in accordance with a sanction or approval granted under the Federal Food, Drug, and Cosmetic Act prior to January 1, 1958, pesticide chemicals in or on raw agricultural commodities or pesticide chemicals that are intended for use or are used in the production, storage, or transportation of any raw agricultural commodity, and color additives. (Refer to section 201 (s) of Federal Food, Drug, and Cosmetic Act.)
