

Fall 1984 Faculty
Front, left to right: Dr. Carolyn Brock, Dr. Joseph Wilson, Dr. W. T. Smith, Dr. John Patterson,
Dr. Dennis Clouthier. Second row: Dr. Robert Guthrie, Dr. D. A. Butterfield, Dr. W. D.
Ehmann, Dr. Steven Yates, Dr. James O'Reilly, Dr. Laren Tolbert. Third row: Dr. Ellis
Brown, Dr. Audrey Companion, Dr. Floyd Holler, Dr. S. L. Smith, Dr. Merle Pattengill.
Back row: Dr. Kurt Niedenzu, Dr. Robert Kiser, Dr. John Selegue, Dr. William Wagner,
Dr. William Plucknett.

the case of the 1997-1998 El Niño, the model captures the observed increase in precipitation over the Amazon basin.

These results suggest that the model is able to capture the interannual variability in precipitation over the Amazon basin, at least in the case of the 1997-1998 El Niño.

The model is also able to capture the observed increase in precipitation over the Amazon basin during the 1997-1998 El Niño, but it fails to capture the observed decrease in precipitation over the Amazon basin during the 1999-2000 El Niño.

The model is able to capture the observed increase in precipitation over the Amazon basin during the 1997-1998 El Niño, but it fails to capture the observed decrease in precipitation over the Amazon basin during the 1999-2000 El Niño.

The model is able to capture the observed increase in precipitation over the Amazon basin during the 1997-1998 El Niño, but it fails to capture the observed decrease in precipitation over the Amazon basin during the 1999-2000 El Niño.

The model is able to capture the observed increase in precipitation over the Amazon basin during the 1997-1998 El Niño, but it fails to capture the observed decrease in precipitation over the Amazon basin during the 1999-2000 El Niño.
