FOREWORD

This bulletin contains much information relative to high schools in Kentucky. Some data are given regarding every high school reported to be in operation at the time this bulletin was prepared.

The official rating given the high schools by the State Board of Education was made on the recommendation of "The Commission on Secondary Schools of the Kentucky Association of Colleges and Secondary Schools." This Commission is composed of the following members:

| | | |
|---------------|---------------------|-------------------|
| P. E. Barker | L. C. Henderson | V. F. Payne |
| W. J. Baird | C. I. Henry | Juliet J. Poynter |
| R. A. Edwards | Sister M. Hilda | Allen Puterbaugh |
| E. E. Gabbard | R. E. Jagers | Chas. O. Ryan |
| Paul Garrett | Sister Mary Aquinas | W. S. Taylor |
| Mark Godman | Kelleager | Hilda Threlkeld |
| J. O. Gross | M. E. Ligon | S. B. Tinsley |

The material in this bulletin has been prepared by Mark Godman and L. N. Taylor, of this Department.

The great demand in the past for copies of a similar publication indicates that the information contained herein will prove valuable to both school officials and citizens generally. I urge a careful reading of its contents.

SECONDARY EDUCATION IN KENTUCKY

Schools and Types of Organization. The Division of Supervision of the State Department of Education has, during the current year, received reports from 808 schools in which some type of high school work is being maintained. This number is in contrast to 818 high school organizations reported last year. Of the 808 high schools reporting this year, 500 are county high schools, 225 are maintained in independent school districts, 76 are private secondary schools, while the other 7 include the 5 training schools operated by the state teacher training institutions, the School for the Blind in Louisville and the Ormsby Village School in Jefferson County maintained by the municipality of Louisville.

The following table should give the reader a fairly clear picture of the number and types of high school organizations that are operating in Kentucky.

The table above discloses that there are seven types of high school organizations in the state. In the above table, 709 of the high schools are complete organizations, i.e., they offer the student work through the twelfth grade. More than one-half of the 709 schools are of the reorganized six-year high school type (grades 7-12). The movement in favor of this type of organization has spread so rapidly in this state that it appears that it is to become the standard rather than simply another form of high school organization. This appears to be true in both county and independent

districts. Next in number of types of high school organizations is the traditional four-year high school (grades 9-12). Only 7 senior high schools (grades 10-12) are found in the state, all being located in independent districts. Considering the other types of organizations in the state, one finds there are 29 properly organized junior high schools (grades 7-9). Sixteen of these are found in independent districts, while 13 are in county districts. The other types of organizations, grades 7-10, grades 9-10 and grades 9-11, 70 in number, are confined almost exclusively to county districts. Observation convinces one that most of these schools are only makeshifts and that their value, in terms of benefit to pupils and cost of operation, is highly questionable. It is hoped that with the advent of good roads and increased transportation facilities, many if not all of these incomplete county "so called" high schools may be transported to permanent high school centers where a well-rounded program of work is offered.

Size of High Schools. The following table should prove interesting in presenting a picture of Kentucky's situation as regards the size of high schools.

TABLE II

The table above shows that the typical high school in this state is small. More than one-half of the high schools enroll fewer than 100 pupils. Kentucky should not despair in this regard since, according to figures for the nation, the median high school enrollment is less than 100 pupils per high school. When one considers that among these schools that enroll less than 100 pupils, there are 39 private schools and 20 high schools for Negroes, it becomes apparent that Kentucky does not rate so badly when compared with the nation in this regard.

one finds in the state has not resulted so much from a conviction of their worth, but rather because of such factors as sparseness of population in areas where they are located, inadequate financial ability of certain counties to operate a better system of schools, or poor road conditions for transportation to larger and better high school centers. In some sections it has been a question whether to have a very small high school or no high school at all. In counties where the population is fairly dense and roads are good, one expects to find consolidated high schools with enrollments large enough to justify a rich and broad program of work.

The percentage of small high schools is decreasing. More and more county boards of education and taxpayers are becoming convinced that small high schools should be regarded as concessions to untoward conditions rather than as things to be desired.

An examination of the annual reports of high schools employing fewer than five or six teachers and enrolling fewer than 125 or 150 pupils as well as an observation of their operation convinces one of the limitations of these schools. Usually one finds that the experience of the teachers in these schools is less than the experience of teachers in larger schools. The teaching load of teachers in the small high schools is usually greater than that of teachers in high schools with 150 or more pupils as judged by the number of classes taught, the number of different daily preparations, the number of different subjects taught and the number of subjects taught in fields in which the teacher is poorly trained. Also in the small high school one usually finds that science, shop and library equipment is inferior, extra-curricular activities are limited, cost of instruction per pupil is high and curricular offerings are confined largely to academic, college-preparatory subjects. In addition to these items of weakness in the small high school, one also usually finds that the general tone and dignity of the larger high schools are more desirable as are also the opportunities for contacts which stimulate worth while social and personal development on the part of students.

It is hoped that county school authorities and those who support the schools will see the wisdom of abandoning many of their small, expensive and usually inefficient high schools through transporting their pupils to larger community centers where a broader and more enriched program of work is provided. Every county superintendent and every county school board in counties where small, struggling high schools are operated should carefully survey the possibility of providing the boys and girls of these little schools with the opportunities that are offered pupils in larger centers. To bring this about generally requires a high type of leadership, since

such proposals often run afoul of local pride, community jealousies and the too often present non-educational interest of the people themselves. It is only in this way, however, that secondary education in rural areas can provide boys and girls with a program of work that better fits them for college or for passage directly into life activities if college entrance is not possible.

The following facts relative to the above table should prove interesting and suggestive:

(1) The number of all children in grades 9-12 (95,415) is 12.08% of the number (790,032) in the school census, ages six to eighteen years. It was 12.02% last year.

(2) The number of white children in grades 9-12 (89,260) is 12.20% of the number (731,808) in the school census. It was 12.15% last year.

(3) The number of colored children in grades 9-12 (6,155) is 10.57% of the number (58,224) in the school census. It was 10.47% last year.

(4) The number of all children beginning the twelfth grade (17,275) is 55.1% of those beginning the ninth grade (31,328). It was 43.1% last year.

(5) The number of white children beginning the twelfth grade (16,329) is 56.2% of those beginning the ninth grade (29,052). It was 43.4% last year.

(6) The number of colored children beginning the twelfth grade (946) is 41.6% of those beginning the ninth grade (2,276). It was 38.1% last year.

The percentages in (4), (5) and (6) are higher in alternate

years because most rural schools have the eighth grade in alternate years only. The difference is less in colored schools because a smaller per cent of them are in the rural schools. The true percentage lies between the percentages of two successive years.

TABLE IV
Enrollment Increases Over Preceding Year by Grades

| 9th Grade | 2,476 | 48 | 1,042 | 26 | 109 | 4 | 21 | 0 | 3,448 |
| 10th Grade | 1,683 | 40 | 142 | 25 | 232 | 3 | 20 | 0 | 2,089 |
| 11th Grade | 24 | 27 | 163 | 19 | 78 | 1 | 1 | 0 | 103 |
| 12th Grade | 1,359 | 5 | 649 | 80 | 8 | 2 | 12 | 0 | 2,077 |
| Total | 2,151 | 48 | 632 | 179 | 618 | 2 | 5 | 0 | 3,631 |

The net increase of Kentucky high school enrollments over the preceding year is 3,631. It should be observed that the major part of this increase (3,016) is in the seventh and eighth grades operated in connection with the regular high school grades. The net increase in the regular high school grades (grades 9-12) is only 615.

There was a net loss of 3,448 in grade nine and 103 in grade eleven. These net losses in alternate years are doubtless due to the fact that most rural schools teach the eighth grade in alternate years only. The increase in grades ten and twelve exceed the decrease in grades nine and eleven by a total of 615, which represents the true net increase in the four years of high school over the enrollment of the preceding year.

There was a small net increase of enrollment in colored schools in all grades except the ninth. The colored are not subject in so large proportion to the alternate grade plan in our rural schools since only a minority of them are in the rural schools.

Information Concerning High School Development. The three tables that follow should prove interesting and profitable to all who are interested in the development of secondary education in Kentucky. Each table practically tells its own story and, hence, little comment regarding each of them is necessary. The information contained in these tables is brought up to date and printed for the first time.

Table V shows a continuous growth in the number of high schools from 1915-16 to 1934-35. Since 1934-35 there has been an increase in the number of colored high schools, while there has been a slight decrease in the number of private secondary schools and a more marked decrease in the number of public white high schools. The decrease in the number of public white high schools has come about very largely as a result of the merger of small county high schools into larger high school units.

The next table gives the high school enrollments from the school year 1914-15 through the present year.

* Beginning with the school year 1932-33, the enrollments of the 7th and 8th grades of six-year high schools and of junior high schools are included in the totals.

Table VI presents an interesting picture of the increase in high school enrollments in the different types of high schools since 1915 to the present day. In this increase in high school enrollments, one finds an increase that is many times greater than the increase in the state's population during the same period. Only one conclusion can be drawn from these figures and that is the growing success of the ideal of high school education for all boys and girls of high school age in the state.

The character of our high school population has changed greatly since 1915. Then the high school was thought of only as a school for the few rather than an institution for the many. In fact, prior to 1908, there were fewer than 50 high schools in the state. They were small, enrolling fewer than 5,000 pupils and were all located in cities. Practically all boys and girls who lived in rural areas were without high school advantages except in so far as private schools were organized. Many of these private schools did not offer work beyond the eighth or ninth grades. It was not until 1908 that the counties were legally bound to establish high schools and it was not until 1914 that districts independent of the county system were required by law to provide high school education for their boys and girls. Since the date of these legal demands on county and independent districts, the growth in numbers of high schools and enrollments has been phenomenal.

The above has been written for two purposes; first, to show that the idea of public secondary education is of comparatively recent date in this state, and, second, that the phenomenal development of this idea has within it significant implications for those who administer public secondary schools in both county and independent districts. It was once thought that the public high school was intended for select economic and social groups and that preparation for college was its chief aim. Today, however, when one notes that only 30 per cent of those who finish high school enter college, one is conscious of the fact that our secondary schools are attracting not only the select, but every other group of our economic and social life. As boys and girls of all groups of our population continue in increasing numbers to find their way into high school, then those who administer secondary education will be called upon more and more to reorganize high school work so as to better meet the varied interests, needs, aptitudes and abilities of those who attend. This calls for and will continue to call for greater adaptation of instruction and subject-matter courses to the economic and social life of today as well as to the individual differences of pupils.

| 1937-38 | 546 | 56 | 75 | 677 |

The above table shows the situation as regards the number of accredited high schools by years since 1910. When one thinks of a high school in its true sense, one thinks of an institution that offers a program of work through the twelfth grade. High schools that are organized to give work which does not extend through the twelfth grade, excepting junior high schools (grades 7-9), should be looked upon as incomplete, feeder schools for regularly organized high schools, i.e., schools that offer pupils a complete high school program through the twelfth grade.

It is recognized that our present standards for accrediting high schools are extremely low. Unquestionably these standards should and will be raised, especially for high schools which seek Class A rating.

* Interpretation of High School Ratings.
 A—Accredited through the entire high school course (through grade twelve).
 B—Accredited through the entire high school course (through grade twelve).
 11 Gr.—Accredited through grade eleven.
 10 Gr.—Accredited through grade ten.
 9 Gr.—Junior high school—recognized through grade nine.
 T—This initial when attached to the designation of any rating indicates that such rating is given in the face of some deficiency, that it is temporary for this year only, and that the school should be discontinued at the close of this school year or reorganized in full compliance with regulations for accrediting.
 E—This initial suggests that an emergency is recognized to exist that may justify the operation of the school even with an observed shortage in the number of pupils or of teachers.
 U—Unaccredited.
