New Career Center

Since plans for a new career center are now in the works, one more thing can be scratched off UK's wish list.

In making the November announcement, President Charles T. Wethington Jr. said, "We need to provide facilities that will support the latest computerized information that will assist our students in their search for career opportunities. This new UK Career Center will do all that and more."

The new \$2 million center will be situated on Rose Street, next door to the King Alumni House. The first million dollars is being provided by First USA, a Bank One company. The money is marked specifically for the Career Center through a credit card agreement with the UK Alumni Association and the UK Athletic Association.

The center will provide space for career counseling, interview rooms for corporate recruiters, a reference library to provide conventional and computerized career resources, workshops, and among other things, will continue to provide lifetime alumni assistance.

"One of the obvious and most important things that the alumni can do for UK graduates, young or old," Wethington said, "is to help them find a job."

UK is in the process of finding other private support for the remainder of the estimated cost of the new center. Construction is due to begin in 1998.

Universities Connecting

Faster than a speeding bullet, more powerful than a locomotive, able to leap tall buildings in a single bound . . . no, wait!

It's the National Technological Grid!

It's a computational infrastructure allowing researchers to use resources from other universities at unheard of speeds!

The alliance of 57 universities "will do a hundred times more for researchers than the current system," says John Connolly, director of the UK Center of the Computational Alliance.

This project will make a network a hundred times faster than the Internet for researchers trying to use remote resources, Connolly says, "hundreds of researchers at UK could potentially get access to more powerful tools to do their jobs."

Hardware and software not found on campus could be accessed if anyone in the alliance has it.

One application of the system at UK would include the design of nanomaterials – computers or machines designed for extremely small scales used in electronics.

"Other research at UK will focus on fluid dynamics, computational simulations of how the stars move and medical applications, like image analysis and advanced disease diagnosis," Connolly says.

James McDonough, a mechanical engineering professor says, "Engineering problems will also be solved by using this network, because of

its ability to deal with high bandwidth or data transfer rate by the network."

The uses of the NTG are not limited to research. English professor Kevin Kiemen's Beowulf manuscript project is seeking to put the story's rare original manuscript into digital format, so scholars from around the world can get high-definition pictures of the manuscript.

"The National Science Foundation will eventually introduce technology created by the alliance into all sectors of society. The foundation funded the alliance with a \$170 million grant given to the University of Illinois at Urbana," he said. They are leading the alliance, called the Partnership for Advanced Computational Infrastructure.

According to McDonough, the system should be in place within a year. "Only two partnerships in the United States are like the Alliance. The other partnership is at the University of San Diego.

UK, dubbed the "Computational gateway to the Southeast," was the only university in the southeast invited into the partnership, "partially due to its past relationship with the National Computational Science Alliance," Connolly says.

Larry Smarr, director of the alliance says, "In essence we are establishing a virtual community that shares its knowledge and pools its resources to create the computational and information infrastructure of the 21st century."

Author! Author!

Vince Davis, chair of the Patterson School for Diplomacy and International Commerce, and John Stempel, director of the Patterson School, contributed key articles to the recently published *Encyclopedia of U.S. Foreign Relations*.

Davis wrote entries on the Department of Defense, the Air Force, the Marines and the old War Department.

Stempel authored the major entry on the Department of State. UK is the only institution to have two authors writing major entries.

LCC Gets Helping Hand

Central Baptist Hospital in Lexington has pledged its commitment to excellence in health care education by donating a major gift to Lexington Community College. The donation of \$44,200 will help support LCC's two-year associate degree healthcare programs by establishing the Central Baptist Hospital Endowed Scholarship Fund.

**University of Kentucky Alumni Association
Hall of Distinguished Alumni
Criteria and Nomination Form for the year 2000**

Every five years the University of Kentucky Alumni Association recognizes a select group of outstanding alumni and honors them by inducting them into the Hall of Distinguished Alumni. There have been 223 people honored since the Hall was established in 1965 to help celebrate the University of Kentucky's Centennial Year.

Nominations are carefully considered by a special committee selected by the Association's board of directors. Please consider the following criteria when nominating someone to the Hall.

Candidates must:

1. have earned a degree from the University of Kentucky at least 10 years prior to consideration;
2. have reached and remained at the pinnacle of their industry or field for a time sufficient to demonstrate perseverance and maturation;
3. be recognized by peers for having reached and remained at the pinnacle of their field or industry (renown with peers should preferably extend beyond Kentucky and beyond their field);
4. have shown evidence of actual merit of work in their chosen field, and community leadership;
5. not be the holder of an elected political office.

Evidence for meeting the above criteria must come from detailed information about the candidates credentials, achievements, the impact of those accomplishments, public awards and honors, and outside sources such as published articles and previously aired video or audio tapes.

Please send a cover letter describing why you think the person should be considered, along with all of the evidence you can gather supporting that nomination.

Nominations may be submitted immediately and will be accepted until June 1, 1999.

For more information, call Kay Johnson at 606-257-1478 or 800-269-ALUM.

Send your nomination material along with the completed coupon to:

the first day. It could not have
happened without you.

Charles T. Wittigton II

There is a three-letter word which perhaps best describes the happenings of this spring semester: WOW.

There is no doubt in my mind that this has been one of the most exciting years ever at UK.

I don't need to remind you of the first event, but please indulge me anyway: Winning the N-C-A-A Men's Basketball Championship. I don't believe I can constructively add to the volumes of words that have been written about our success in San Antonio except to say how proud we all are of this basketball team and Coach Smith and his staff. Our players exemplified the qualities of true student-athletes—both on and off the court.

This year's team is an exceptional group of young men who serve as role models for this University. Their determination and achievements have set the standard for future teams.

Then, on April 3, the much-anticipated William T. Young Library was dedicated and opened to the public. As you may know, this state-of-the-art facility is only the third new general library building to be constructed in the 130-year history of Kentucky's largest university.

When I became president of the University of Kentucky in 1990 it was my intention not only to plan for the University's short-term immediate needs, but also to move forward in a way that would always keep UK in the vanguard of the educational community. Providing the very best educational tools to our faculty, staff and to the Commonwealth in which we live—as well as to alumni, far and wide—has been a guidepost for me. With that guiding principle always in mind, I set a goal of constructing a new library to meet the critical needs for library and information services in Lexington, in all the community colleges throughout Kentucky, and to serve as a resource for other libraries throughout the state.

My vision has become a reality in large measure due to the special assistance, countless hours of time, money and dedication and selfless support from so many people in the Commonwealth of Kentucky—people just like you. I am especially grateful

to William T. Young whose generous \$5 million donation was the foundation for the library fundraising campaign. Mr. Young was one of more than 14,000 donors from every county in Kentucky and throughout the nation who participated in raising some \$22 million in the University of Kentucky's private fund-raising effort and \$4 million in book endowments to build the magnificent structure that was dedicated April 3.

There are so many people to thank that space here doesn't afford me the opportunity to recognize everyone, but I would like to particularly express my gratitude to alumni. The UK Alumni Association and individual alumni throughout the world have been behind this project since the first day. It could not have happened without you.

A key goal of the University of Kentucky is to be recognized as one of America's top 20 public research universities. This state-of-the-art library will greatly facilitate our move into that elite top 20 group. I believe it is worth noting that the UK system of libraries is presently ranked 32nd among the 67 public research universities in the nation, and can be expected to move even higher with the opening of this new library.

Clearly we are in the information age. It is information that fuels the university. It is information that is so essential to our growth as a Research University I as rated by the Carnegie Foundation. The new William T. Young library boasts the very latest digital communications system that provides boundless resources to meet the needs of faculty, students, and staff. Equally important, the library is dedicated to extending its services throughout the state of Kentucky, making it possible for everyone in the Commonwealth to utilize its vast resources.

This is YOUR library. I invite each of you to search out the library's Internet web pages, to take advantage of the tremendous resources within fingertip's reach, to visit the University of Kentucky campus in Lexington and see this new library.

I am especially pleased that so many of you were on hand to help celebrate one or both of these exceptional events—either in person or via television. Both happenings are dreams fulfilled—for you and for me.

The William T. Young Library

Dedicated April 3, 1998

Overview

The William T. Young Library is a library of tomorrow for Kentuckians of today.

The \$58 million structure is a repository of knowledge as well as a symbol of the university's commitment to academic excellence. It is a building that appeals to the eye and the intellect.

"Public buildings, especially libraries, should be something above the ordinary," says President Charles T. Wethington Jr. "We wanted this building to make a statement about the importance of a library. I feel we have done that."

This library, he added, is a symbol to our students and faculty, now and later, and to all Kentuckians that academic excellence is our top priority and that we "are committed to becoming one of the nation's top 20 public research universities."

President Wethington's commitment to a new library came early in his administration. As the longtime chancellor of the community colleges and interim university president for 10 months, he was keenly aware of the need for a new library building. It was a momentous decision, but one that came easily to the new president. He gave the project top priority, knowing that substantial private funding would be needed.

More than 14,000 people gave in excess of \$21 million in a statewide campaign for private funds to help pay for the building and to fund a book endowment. Lexington businessman William T. Young kicked off the campaign in October 1991 with a \$5 million contribution.

At-A-Glance

Location: A 30-acre site in Clifton Park, between Rose Street and Woodland Avenue.

Cost: \$58 million for building construction and equipment.

Size: 365,350 square feet.

Height: 167 feet 4 inches.

Original text by Rex Bailey
Original design by Becky Simmermacher
Photography by Tim Collins
Used with Permission
Text additions by Kay Johnson and Liz Howard Demoran

At-A-Glance

Shape: Roughly octagonal, two-story brick and stone arcades on each of four facades, porticos with balconies, two-story windows and white columns.

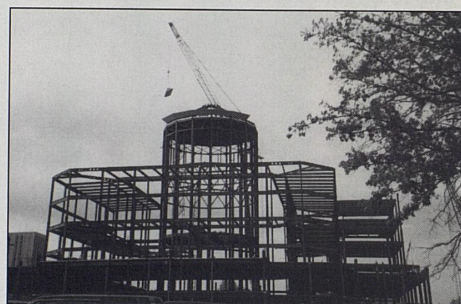

Style: Contemporary, with strong influence of red brick Georgian-style buildings often associated with college campuses.

Exterior: Brick, with cast-stone and stucco

Authorized by the General Assembly in 1992 to proceed with design and site work, the University assembled a blue-ribbon panel to select an architect. The Boston firm of Kallman McKinnell & Wood was chosen and, in September 1993, it unveiled plans for a 365,350 square-foot building that would house much of the University's 2.6 million volume collection.

Turning the first spade of earth, however, was delayed. Because of budget constraints, the state legislature was unable in 1994 to provide construction funds as expected. An innovative financing plan involving the Lexington-Fayette Urban County Government, the UK National Alumni Association, the UK Athletics Association and the Kentucky Medical Services Foundation resulted in the needed sale of bonds.

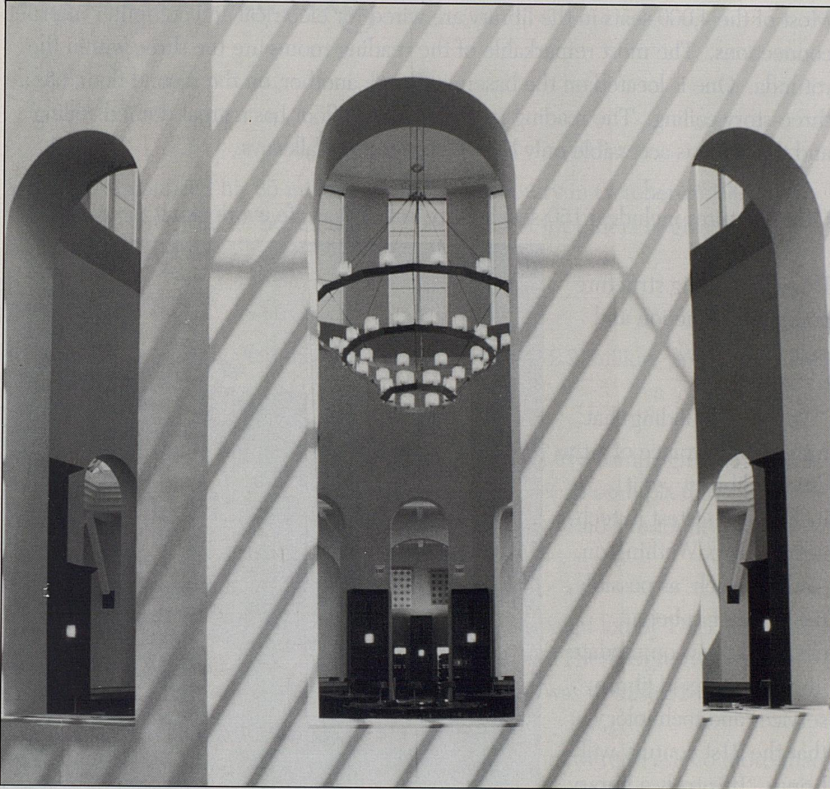

"All who use this great facility for decades to come are indebted to the Urban-County Government, the Athletics and Alumni Associations and KMSF," says President Wethington. "We enjoy this great facility today because of them."

Ground was broken on Dec. 6, 1994. As the library began to take form, it claimed its place as the architectural centerpiece of the campus.

With five above-ground floors and a basement, the brick, stone and glass building is a massive structure in a 30-acre, park-like setting. It has two principal entrances. Vehicles approaching from University Drive can drive within a few feet of the south entrance. The vista from the west entrance includes the university's other landmark building - Memorial Hall, built some 70 years earlier.

Patrons enter through a gallery that opens into a dramatic skylit atrium that brightens an equally dramatic five-story rotunda. A pair of curving staircases hug the rotunda. Downstairs leads to a microcomputer laboratory, audio-visual facilities and group instructional rooms; upstairs, on the second floor, are the Reference and Periodicals Departments and reading rooms. The third, fourth and fifth floors contain stack space, reading rooms and group study and seminar rooms.

Natural light flows in from the atrium skylights to nearly every part of the building that patrons can access. The light is softened by the dark oak tables, chairs and woodwork throughout the interior.

During the design phase, lead architect Michael McKinnell noted that no one knows for sure what libraries will be like in the future. "What we do know," he says, "is what people will be like. They will want a lot of light and pleasant spaces to work and study in that suit their style and interest."

"Sometimes buildings become monuments that don't work very well," says Director of UK Libraries Paul Willis. "From the beginning," he added, "we wanted a building that was functional, easy to use. We have accomplished that."

It is a building for books and other library holdings, but it was designed for people.

At-A-Glance

Entrances: Two, one facing University Drive (south) and the other a pedestrian approach from Rose Street (west side).

Floors: Five above ground and one below ground.

Seating: Approximately 4,000, including 1,400 seats in reading rooms, 467 study carrels and seating to accommodate some 350 faculty and graduate students.

Stacks: 198,828 linear feet (about 37 miles) of shelf space to house 1.2 million books.

Most of the 4,000 seats in the library are wired for electrical and computer internet connections. The most remarkable of the reading rooms are the three within the rotunda. One is located on the basement level; another, on the second floor, has a three-story ceiling. The reading room on the top floor has a great domed ceiling and the room is accessible only by two suspended walkways.

Other features include a 150-seat lecture hall and a cafe overlooking the east lawn.

It is an inspiring structure combining function and grace.

"We have a building that has the appearance of a traditional library, yet it includes the latest in technology," says Wethington. And, as much as possible, the library has been designed to accommodate improvements in library services and technology that the 21st century will bring. "It is truly a library of the future.

And, he adds, "It is a library for everyone.

"Without access to books and technology, people are limited in their ability to learn," President Wethington says. "I am convinced there must be facilities like this for people of all incomes and walks of life. The University of Kentucky must make every effort to ensure that its library collection is available to everyone."

Fundraising

When he announced his \$5 million gift for a new library in October of 1991, William T. Young said he hoped it would be a catalyst for others to give.

It was.

A year later nearly 14,000 donors had given another \$12.2 million. And by the end of 1993 the total surpassed \$20 million.

This success owed much to Mr. Young's generosity and to a campaign strategy that asked the University of Kentucky faculty and staff to set an example for others. "If we want help from others, we first must help ourselves," said President Wethington.

That was the theme of a faculty, staff and retirees campaign led by Dr. Louis Swift, a classics professor and dean of Undergraduate Studies. There were two goals: one was to ask each employee to contribute, the other was to raise \$1 million.

The campaign had a unique feature. Volunteer solicitors were to ask no more than five fellow employees to contribute. That meant there were about 3,000 employees soliciting gifts.

This internal campaign took less than six months. It was an extraordinary success. More than 9,840 faculty, staff and retirees gave \$1,050,000. Thanks to the Agriculture Extension program and the Community College System, there were contributors in each of Kentucky's 120 counties. At nine community colleges and many departments, particularly in the physical plant division, 100 percent of the employees contributed.

At-A-Glance

The William T. Young Library was the first fund-raising effort for the UK Alumni Association since becoming a dues-paying organization in 1971.

Association president Marianne Smith Edge presented the key to the library to President Wethington saying, "On behalf of the University of Kentucky National Alumni Association it gives me great pleasure to stand in a building that truly represents the university and its alumni commitment to academic excellence.

"As alumni we welcomed the opportunity to enter into this partnership four years ago with the university. Dr. Wethington, we applaud your vision and foresight in engineering a project that is vital to the growth of the university and the people of this Commonwealth."

Pack the Stacks!

President Wethington termed the university family's support as "overwhelming."

An unusual aspect of the solicitation effort was that there was a campaign within the campaign. Before the new library project even became a project, the UK Libraries received a challenge from the National Endowment for the Humanities. The NEH would give the library system \$750,000 if UK could raise \$2,250,000. The \$3 million would be endowed and allow the library to enhance the size and quality of its collection, especially in the humanities.

Thus, donors could give to the NEH Challenge or the library construction fund. Many gave to both. The students rallied around the NEH Challenge with a "Pack the Stacks" campaign led by student Erica McDonald of Louisville.

The success of this internal campaign gave added spark to the quest for support from alumni, corporations, foundations and many organizations throughout the Commonwealth.

More than 5,650 graduates made a contribution through the Alumni Campaign chaired by Lynwood Schrader of Lexington. Louisville businessman and alumnus Jim Stuckert headed the business solicitation phase that brought in \$4.4 million from 152 corporations. Seventeen foundations contributed \$688,000.

Nearly 500 UK Fellows and Library Associates members contributed. Many alumni and friends of the university read about the campaign and responded before they were asked to contribute. Donors frequently made gifts in memory or honor of family members.

Contributions to the library continued to come in. Several alumni and friends bequeathed money to the library. The official gift totals: \$17.5 million for the library building fund; \$3.6 million for the NEH Challenge.

Design, Architecture and Construction

Architect Michael McKinnell designed the William T. Young Library. Its exterior reflects a Georgian architectural style, but it is a late 20th century contemporary building that delights and surprises both outside and in.

It is highly symmetrical, roughly octagonal with its five stories topped by a large cupola in the tradition of the Library of Congress and other great libraries. There are two-story stone and brick arcades on each of four facades; porticos with balconies; two-story windows and white columns supporting an overhanging roof. The exterior is brick, cast-stone and stucco.

Inside, the main design feature is a building within a building: an open cylindrical area of three reading rooms located within a skylit atrium. The largest of the reading rooms in this rotunda has a three-story ceiling.

The atrium skylights and two-story windows allow daylight to penetrate virtually every area of public access in the 365,000 square-foot structure.

Leher McGovern Bovis, Inc., of Princeton, N.J., is not a household name. The results of its work, however, are known worldwide.

The company is a construction management firm and is ranked as the world's best by Engineering News Record magazine. Its projects include the Statue of Liberty renovation, the Atlanta Olympics site, Euro Disney and, now, the William T. Young Library at the University of Kentucky.

Lehrer McGovern Bovis' project team, headed by Rick Spleen, was responsible for directing the work of at least 15 prime contractors and their subcontractors.

Dall Clark, project manager for UK, said the \$58 million library was the University's largest-ever construction project. It involved 202 caissons, 160 tractor trailers carrying 6.4 million pounds of steel, 5,590 pieces of structural steel connected by 73,000 bolts and 50 truck loads of shelving.

At-A-Glance

It is this building, says the lead architect for the William T. Young Library, that symbolizes to all who see it that a university's purpose is the pursuit of knowledge

Profile

Charles T. Wethington Jr. had been president of the University of Kentucky three weeks when he announced the most ambitious construction project in the institution's history.

"We need to work toward building a new library for this campus," he told the faculty senate in October of 1990.

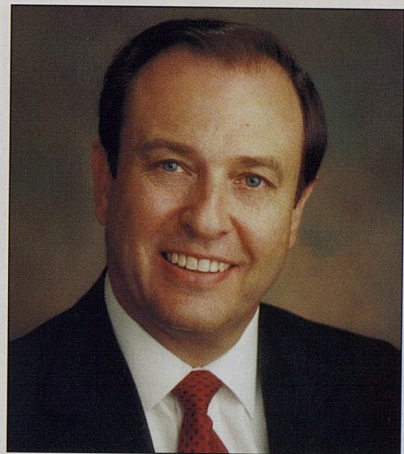

Wethington's decision, of course, was the product of many months of consideration. He had been interim president for almost a year and an administrator in the Community College System since 1967, including nine years as chancellor.

His interest in libraries spanned his educational experience. He grew up in a home that valued books. He learned his way around the King Library while earning his master's and doctoral degrees. As chancellor he was actively involved in automating the individual community college libraries and linking them to the main campus catalog.

And in the past seven years, President Wethington has learned more about libraries than any non-librarian would ever know. He has been intimately involved in every phase of the project.

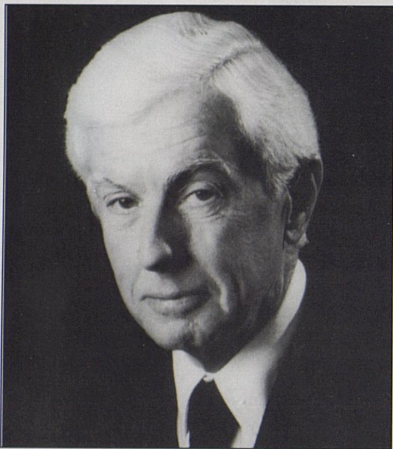

His vision, leadership and perseverance have produced for the students, faculty and people of Kentucky a new physical and scholarly landmark that will be a fount of knowledge and pride for all.

Charles T. Wethington, Jr.

Profile

William T. Young

It is fitting that his name is given to a building that will profoundly affect the lives of Kentuckians in the 21st century.

For William T. Young himself has had a profound influence on his native state. Businessman and philanthropist, he has had an extremely successful career that has been enriched by civic achievements.

His ties to UK go back many years. As a freshman in 1935, he studied in the four-year-old Margaret I. King Library. He graduated in 1939 with high distinction with a degree in mechanical engineering. He was one of the original UK Fellows and has served on the UK Board of Trustees.

Young's businesses have ranged from making peanut butter, to founding a storage company, to starting a horse farm that produced the 1996 Kentucky Derby winner. He has been a director of many Lexington and Louisville companies. And he even found time to serve as a \$1-a-year chief of staff to Gov. John Y. Brown Jr.

His civic endeavors are legion. The organizations he has helped with his time and his money over the years recognized him as Lexington's Outstanding Philanthropist earlier this decade. The William T. Young Library assures that future generations will recognize his commitment to UK and to all of Kentucky.

Profile

John R. Gaines likes big ideas, big projects and big results.

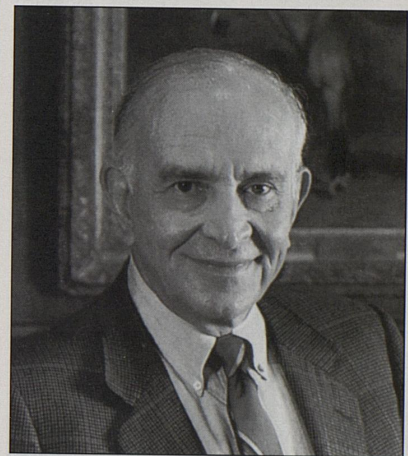

He liked the idea of building a new library in early 1990 when it was only a twinkle in a few mind's eyes. A member of the UK Library Associates, he knew the need. And he had the passion.

This passion had served the University well. The UK Art Museum and the equine research program have benefited from his support and interest. The Gaines Center for the Humanities owes its existence to Gaines and his wife Joan.

Once the library project became a University priority, Gaines was relentless. It was a rare day that he was not in the president's office, or the library director's office, or the fund raising office or all three. He met frequently with students. He was on the panel to select the architect. He wrote an essay on the value of books and libraries to mankind throughout history that became the campaign's intellectual charge.

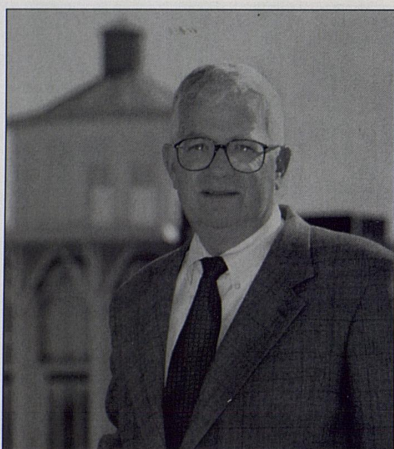

The former owner of Gainesway Farm in Fayette County and founder of the Breeder's Cup, Gaines has been described as a visionary and a renaissance man. His love of books is equaled by his ardor for art and art history...and, of course, his passion for big projects and big results...like a magnificent new library.

John R. Gaines

Librarians and Library Buildings

Paul Willis

Paul Willis, Director of University Libraries for 23 years, is only the institution's fourth librarian in its 133 year history.

Raised in Meade County, Willis always wanted to be a librarian, actually a law librarian, and came to UK as an undergraduate with that in mind. With a pre-law degree from UK and library science degree from the University of Maryland, Willis graduated from the UK law school in 1969.

He was named acting Director of Libraries in 1973 when Stuart Forth left UK after heading the library system for eight years. A year later, Willis was named director.

Armed with early 1980s internal and external evaluations of library facilities that called for a new building, Willis took every opportunity to campaign for a new facility. He and others he enlisted were persuasive. When President Wethington gave a new library a top priority in his first days as president in 1990, he said he had been convinced for a number of years that a new library was essential.

Carnegie Library

The William T. Young Library replaces the Margaret I. King Library, which was named for the university's first librarian, as the main campus library. Miss King was named registrar and secretary to President James K. Patterson in 1905 and in 1912 became UK's first librarian, a position she held until her retirement in 1949. She was followed by Lawrence Thompson, a classical languages scholar who was librarian until 1963.

The William T. Young Library is the university's fourth library building.

The Carnegie Library, opened in 1909, was the first campus building specifically designated as a repository for library holdings. It was razed in the 1960s to make way for the Whitehall Classroom Building.

Margaret I. King Library

The Margaret I. King Library opened in 1931 and—with the move to the William T. Young Library—will hold special collections and archives. The King Library was expanded in 1963 and that part of the building will become a chemistry and physics computer laboratory. The King Library North addition, connected to the main library via a second-floor pedway, was opened in 1974 and will become the Lucille C. Little Fine Arts Library.

Reflections

A modern university without an ever-expanding library as an effective information resource is soulless and intellectually sterile. For more than a century the University of Kentucky has battled to validate this adage. The institutional saga of creating a vital instructional and research facility has not been without its modest dramatic moments. Every phase of employing a competent faculty, fulfilling a research mandate and producing a body of competently trained graduates has resulted in the production of a vari-colored historical fabric. None of these, however, has been more dramatic than the struggle to create an adequate institutional library.

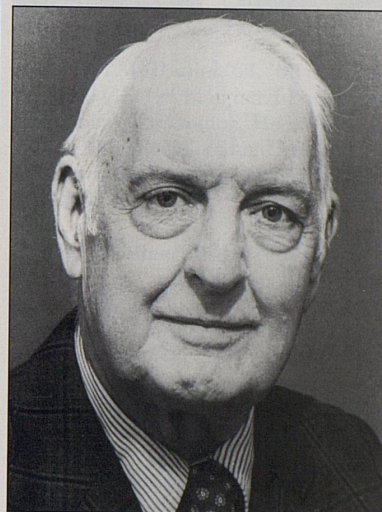

Assembling a library collection in the University of Kentucky in the 20th century has involved dreams, frustrations, courage and, always, perseverance. It is fitting that the University celebrates the century's close with the realization of a dream and a firm intellectual commitment to the future.

Writing from the confines of the presidential office of a state college in 1908, James Kennedy Patterson enunciated a dream of realistic proportion. Figuratively going hat-in-hand he solicited of his fellow Scotsman, Andrew Carnegie, a gift of \$26,500 to build a 56-foot square library building on the college campus.

In a cardinal moment of decision-making in 1917, the title "university" was bestowed upon the politically-blighted Kentucky State University. Changes in both title and administration brought into focus an entirely fresh implication and challenge for the institution. Its new president, Frank L. McVey, had a clear perception of what a university should be. The changes in Lexington occurred during an era when the entire South was awakening to the up-grading of its universities.

In 1920 there were almost as many substantive books in the Yale University Library as there were in all the southern state universities. This, however, was to be changed. With the expansion of disciplines and faculties there arose increasing demands for adequate libraries. The newly-entitled University of Kentucky began to feel the impact of the southern renaissance. By 1927 Dr. McVey sought public funds to construct a new library building to house a growing collection of books and documentary materials which would sustain an improved undergraduate and graduate studies program, and encourage faculty research.

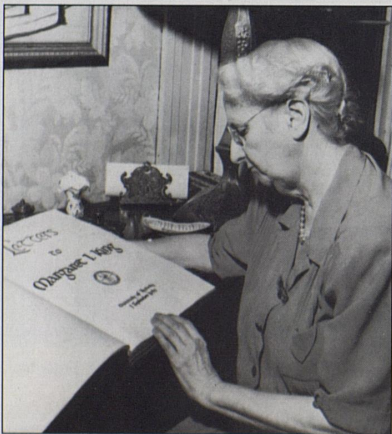

*Thomas D. Clark
Kentucky Historian
Laureate*

The date October 23, 1931, when the Margaret I. King Library was dedicated, marked the dawn of a new era in the educational history of the University, and of the entire Commonwealth of Kentucky.

In the evolution of a shrinking world, the demands for literacy and universal information have extended library missions. No longer are university libraries isolated islands or institutional adjuncts serving an elitist patronage. Their modern missions extend well beyond superficial geographical and political as well as institutional boundaries.

No one in 1931, even the most erudite librarians, could visualize the changes that would come in the areas of reading, research, information gathering, authorship and publishing. When the building of the Margaret I. King Library idea was conceived, few academic libraries, beyond the pale of the ivy-shrouded institutions, the Library of Congress, the New York Public Library, the American Antiquarian Society and the Huntington Library, considered a rare book and manuscript collection important. This was imminently true at the University of Kentucky, which in 1930 was a research-barren ground. In succeeding decades the maturing of both the book and documentary collections has been miraculous.

Margaret I. King

In this moment of its third library dedication, the University of Kentucky sets its informational compass on a fresh course. It reaffirms its commitment to the gathering and dissemination of information at the highest scholarly and technological levels. In this moment it must be recognized that here in the very heart of the old western frontier there will exist and be readily available the precious records of human civilization.

Just as a new physical vista has been opened into the heartland of the University itself, this noble structure must stand as a positive symbol to the opening of even broader vistas into the past and the future. From this point on the University of Kentucky makes the solemn commitment that it will harbor the records of human progress in all ages, and will forever make readily available the ever-changing information revealing the travails and accomplishments of mankind. This noble new structure must ever stand as the spiritual center of free expression and investigation which so eloquently give substance to the collective term "university."

■ Before 1950s

H. Philip Orem '32, '34 of Columbia, Tennessee, is a retired chemist, chemical engineer and consultant. He lives in Warm Springs, Virginia.

Lester Reynolds '39 won a gold medal in golf in his age division at the U.S. National Senior Sports Classic VI in Tuscon, Arizona, in May 1997. Reynolds, now 86, scored 171 in two days. He has shot his age or below 88 times.

Berl Fowler '40 closed the Fowler-Turner Lumber Company in Madisonville last May, after 43 years in business.

Lawrence Nickell '48 has published a book, *Red Devil*, about his personal experiences as an infantryman in the 3rd Army campaign in Europe.

Former Students

Donald W. Schindler has retired after 30 years of working with biopharmaceuticals. He keeps busy with 16 grandchildren – says they now seat 32 people when the whole family gathers for Christmas dinner. He and his wife, Dorothy, live in Montvale, New Jersey.

Dick Hite is president and CEO of Norton Ditto, a men's clothing store his family helped build 86 years ago in Houston, Texas.

Janice Bell is assistant vice president in the loan operations department at the main office of Citizens National Bank in Knoxville, Tennessee. She and her husband live in Cosby.

Frank Bryant is manager of Kentucky Utilities Company's Winchester and Irvine operations.

John Lansing is vice president and general manager of WEWS television in Cleveland, Ohio.

Susan Weiner is senior vice president of marketing and sales promotion for Petrie Retail Inc., based in Secaucus, New Jersey.
