My dear Sir,

I just send a line to let you know that I am still in the land of the living, and working now at your slides. Have not seen Hackett yet but shall very shortly and will write when I have so done. Have lately been examining for figuring, some microscopic organisms obtained in the deep Atlantic soundings for laying down a Telegraph Cable between America & Ireland, and quite think that they will afford us an addition or two to their microscopic boxes. Many fragments of the foraminiferous shells being pierced as your fish-

scales - I am disposed to think there
are two good species, one extremely fine,
the other coarser; both very simple in charac-

ter.

The finer quite
thick has some-
times at each

200 diam^{er}.
bend a dilatation. I will write more & send
you drawings and perhaps be able to send you
a slide block over shortly, remain

Yours very sincerely
Luffen West

C. B. Rose Esq.
