

The Spring of the Year

The Spring of the year is now returning one of the most beautiful seasons of the year, it brings forth the green grass and causes the trees to put forth their green leaves, and their beautiful shades, and it also brings with it the birds that have flown but they are now returning. Spring puts new life in every thing by bringing forth its green grass to nourish and feed the horses and cattle. It is very nice to look around us and see the beautiful flowers gazing at us that is a pleasure which no other season of the year can afford, the Spring sets the farmer to work. Most all the farmers are now fixing to plant their crops. I have told you all I know about Spring.
